AMENDMENTS TO THE SPECIFICATION

In the Abstract:

Please replace the Abstract with the following amended Abstract:

-- There is disclosed a security device, a security system and a method of providing security in a retail environment or the like. Shopping trolleys associated with the retail environment ~~[[are]]~~ may be fitted with security devices having a receive-only wireless receiver and a processor, the receiver receiving wireless signals transmitted from one or more transmitters located at various locations around the retail environment. By ~~analysing~~ analyzing the wireless signals as it passes thereby, the processor of the security device ~~[[can]]~~ may determine a location and/or a direction of travel of a shopping trolley to which it is fitted. In addition, an alarm signal may be raised if a predetermined signal or sequence of signals is detected. ~~The alarm signal may cause activation of a wheel locking device on the trolley and/or may cause an alarm device to generate an audible or visual alarm signal. Embodiments of the present invention provide a relatively low cost security and trolley tracking system.~~ --
